

These pictures above should show that I have found the same types in the Renggeri Marl (with stress on Renggeri Marl, that means scarburgense to costicardia subzones). But *Cr.renggeri* as name given by Palframan for me partly is doubtful.

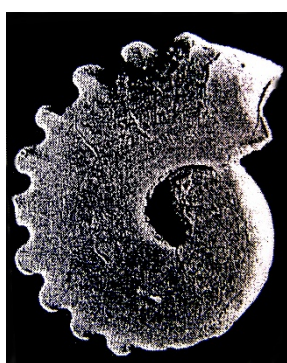

pl. 48.7 x1 ~46 mm

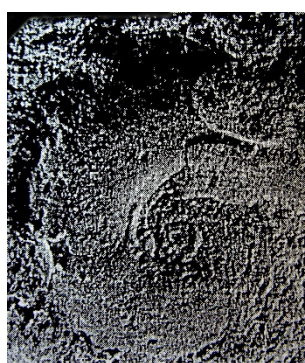

pl. 48.3 x1 38 mm

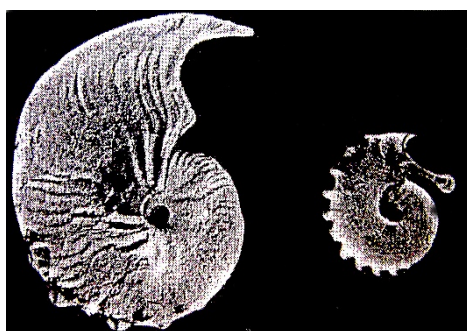

pl. 50.5 x3 21mm  
Giant adult male

pl. 52.6

pl. 52.8 Where are the teeth ??

*C.renggeri* based on Taf 52.5+8, *T.richei*  
based on Taf.48.7  
pl. 52.9 nat. size (?) 46 / 21 mm

HR-Pl.43.1a  
Presumable *Disticoceras bicostatum*  
Border *lamberti* -/ *scarburgense*-Sz  
1-6 = teeth

HR-Pl.43.3a  
Eventually *Brightia* sp. - *scarburgense*-Sz  
No teeth
